

New Skybolt SK2003AW5 Platemount CamWashers

STC 'd FAA-PMA and TSO-C148

January 1, 2010

US Patent Pending

Also new for 2010 is the Skybolt SK2003-AW5 Series Alignment Washers or CamWashers. Our latest innovation in cowling alignment features a "neutral default center" CamWasher. Unlike the 1st generation camwasher we developed in 2002, this design allows the installation to begin with a "centered" orientation. Previous designs never had a default center, thus limiting adjustment options. Using the Skybolt developed alignment template SK203-TEM1, it is very simple to set the mount location to the exact center of the respective cowling fastener location. Simply modify any Skybolt SK2003A Series Mount for the CamWashers, install, and "dial" the location of the Platemount as determined by the template. No complex drilling of any aircraft components is required to perfectly align any Cessna cowling.

SK2003-AW5S Components shown with modified SK2003A Series Platemount

Skybolt Part#	Description	Price
SK2003-AW5S	CamWasher Set*	\$6.99
SK203-TEM1	Alignment Template	\$8.97

Use with any Skybolt SK2003A Series Platemounts

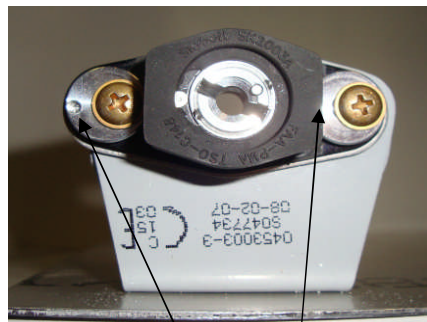

SK2003A Series Mount drilled to 7/16 with Unibit-1 Stepdrill

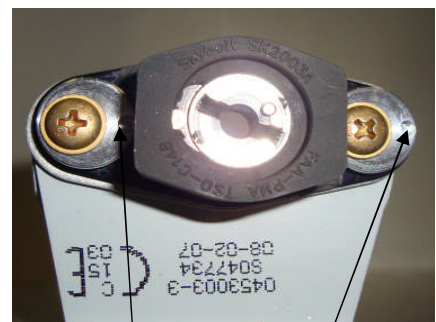

*SK2003-AW5S includes 2 ea CamWashers, 1 drilled shim.

SK2003-AW5 CamWashers set at "Center Default Position"

SK2003-AW5 CamWashers set at full left of center position

SK2003-AW5 CamWashers set at full right of center position

The same adjustment applies for full up and full down. As these are "CamWashers", any positioning between full up, down, left, and right are easily "dialed" for perfect alignment.
